"Reducing Total Operating Costs" with Komatsu Innovative Technologies

The fusion of advanced engines and Komatsu's unique hydraulic system enables the new CX50 series to achieve a significant reduction in the total operation costs and facilitates superior work performance. Our innovative machines challenge the conventional concept of the forklift.

Diesel Engine Truck	An optimum engine achieves low fuel consumption and high performance.
Gasoline Engine Truck	A fully electronically controlled engine with a 3-way catalytic system conforms to the latest emission regulations.

Komatsu's Hydraulic System and the NEW Diesel Engine reduce the Fuel Consumption

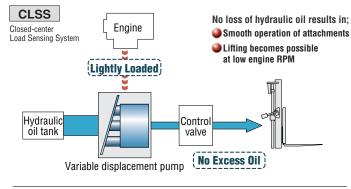

In order to minimize hydraulic loss and reduce the engine load, the new CX50 Series adopts the CLSS hydraulic system, a proven technology of Komatsu construction machines. The compact 3.3-liter engine features superior performance and achieves up to 20% less fuel consumption.

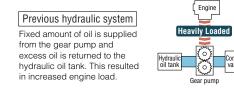

Komatsu tested data, comparison with FD50A-8 model The results may vary depending on condi

The "CLSS" contributes to Low Fuel Consumption and High Productivity

The Hydraulic load is automatically detected and only the appropriate amount of oil is supplied via a variable displacement pump. This system eliminates the loss of hydraulic oil and reduces the engine load.

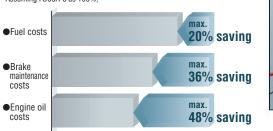

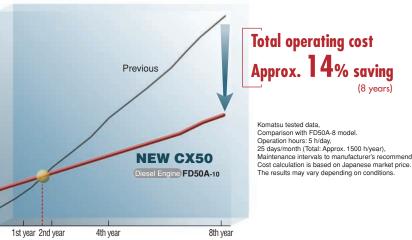

Greatly Reduced Total Operating Costs (Diesel)

The sealed wet disc brakes can withstand about 10,000* hours operation without maintenance and eliminating frequent brake shoes replacements. The engine oil replacement interval has been extended for 300 hours, which reduces oil costs. The reduced maintenance costs and significant fuel saving provide a total operating cost reduction of about 14% over eight years of usage. *A periodical check and oil replacement are necessary. Komatsu genuine engine oil is recommended.

Running cost (Accumulated costs for 8 years) Assuming FD50A-8 as 100%;

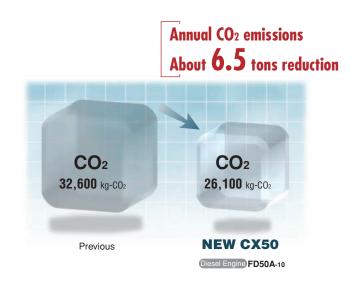

■ Total operating cost (*Image)

(8 years)

The Advanced Technology offers Reduced CO₂ Emissions (Diesel)

The diesel models feature the SAA4D95LE-5-A engine in combination with the efficient CLSS hydraulic system, enabling them to reduce annual CO₂ emissions by about 6.5 tons.

Komatsu tested data, Comparison with FD50A-8 model The CO₂ emission coefficient is given in the Common Guidelines of the Japanese METI and MLIT (April 2006) The results may vary depending on conditions

An Advanced Diesel Engine conforms to the Latest Emission Regulations

Low fuel consumption and low environmental impact are enabled by elimination of excess combustion and the use of the combined technologies of the high pressure common rail system, electronic control system, new combustion system and air to air charge air cooling system.

EPA Tier 3 / EU Stage IIIA Emission Co.

Gasoline Engine with a 3-Way Catalytic System

KOMNIS

Superior "Productivity" and "Reliability" satisfy demanding operations

Durable Wet Disc Brakes to withstand Severe Conditions

The wet disc brake is sealed with oil to block dust penetration, providing durable, water resistant and fade resistant characteristics. Smooth, stable braking provides "Productivity" and "Reliability" in demanding operation.

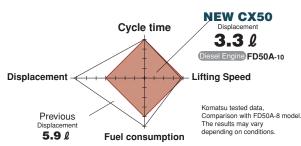

First-class Productivity is achieved

First-class Cycle Time

The diesel models adopt a compact 3.3-liter engine with the advanced CLSS hydraulic system to achieve high productivity and a first class cycle time. The gasoline engine model also achieves a superior cycle.

The NEW CX50 Series achieves high productivity equivalent to the previous CX Series.

•Lifting Speed (Loaded)

Diesel Engine FD50A-10 470 mm/s

•Traveling Speed (Unloaded)

Diesel Engine FD50A-10 25.0 km/h

Gasoline Engine FG50A-10 440 mm/s

Gasoline Engine FG50A-10 24.5 km/h

A Cooling System to achieve Increased Braking Stability The oil in the wet disc brake system is circulated through the brake oil

cooler. This mechanism ensures stable braking under a heavy work load and prevents deterioration of the braking force due to raised oil temperatures

Brake oil cooler Wet disc brake

A Cushion Valve improves the Brake Feeling

Komatsu's unique cushion valve enables a controlled braking force that precisely reflects the pressure on the brake pedal. The braking behavior is thus improved.

- Steady breaking is always achieved.
- Overheating of the brakes is prevented.
- Rough stopping is prevented when braking.
- Downtime and maintenance costs are reduced.

The CLSS enables Lifting at Low Engine RPMs

The CLSS makes it possible to lift the load for fine height adjustment without increasing the engine speed.

Reduced engine RPM in the following cases:

Fine adjustment of fork height Lifting fork tips before starting Fine adjustment for side shifting

OMATS

ONIY

The CLSS enables advantages such as:

Smooth traveling during hydraulic operation

Superior productivity is also featured when fitted with attachments Fuel consumption reduction up to 20% (Diesel)

Fully Hydrostatic Power Steering for Superb Maneuver

The FHPS (Fully Hydrostatic Power Steering) mechanism facilitates fully stationary steering as well as switchback operations using the small diameter steering wheel. The system has a superior response capability so that the operator can pick up or place cargo flexibly even in a narrow space. In addition, steering knob synchronizer function is available.

Excellent Durability for Demanding Work

Rugged Design with High Rigidity

The high rigidity mast, frame, front and rear axles ensure outstanding reliability even when performing heavy-duty work.

[Mast]

A heavy mast rail profile for excellent rigidity. [Frame]

Increased thickness of the counterweight mounting section. [Front axle]

The proven design of the Komatsu wheel loaders is adopted. [Rear axle] The durability of the Power Steering cylinders is improved.

Improved Reliabilities for the Hydraulic and **Electrical Systems**

The main hydraulic pipe connectors are face-sealed using O-rings. Waterproof connectors are provided to the main harnesses and the system controller in order to provide higher resistance to water and dust. Hydraulic and electrical piping systems are in separate configurations to improve the reliability and servicing.

Engine Protection for Maintaining the Engine in Top Condition

The electronic engine controls upgrade the performance of the engine protection (fail-safe functions).

5

Advanced Design in Pursuit of "Safety and Comfort"

Effective Safety Mechanisms

"Operator Presence Sensing system"

The Operator Presence Sensing system incorporates a Lifting/Traveling interlocking function. This is a safety function for disabling traveling and lifting mechanisms when the operator is not correctly occupying the seat. An alarm buzzer sounds if the operator leaves the seat while traveling.

*The traveling interlocking function only disengages traction and does not automatically apply the brakes. * Operator Presence Sensing system: ISO3691-1 compliant Lifting interlock lamp on the control panel

Parking Brake Alarm

A Neutral Start Function for Preventing a Sudden Start The engine cannot be started unless the F-R switch is in the neutral position.

A Wide Angle Center Mirror enables an Easy Rearview

ISO-Compliant Enhanced Overhead Guard for Operator's Protection

A Safety Mechanism that prevents starting the engine unless the brake pedal is pressed

Secure Operation Controls Improve Operator Work Efficiency

Secure Lever Controls with **Minimum Movement**

Finger-tip operation with the electric F/B level

Control lever with n excellent hand fittina profile

A Smaller Steering Wheel -**Permits Widened Front Visibility**

Use of a smaller steering wheel and redesign of the dashboard have improved the visibility of the bottom of the fork, thus further facilitating the lifting operation.

Steering wheel diameter: 300 mm

Improved Brake Feeling

Komatsu's unique cushion valve enables control of the braking force in proportion to the pressure on the brake pedal and improves the brake feelina

activated

Comfortable & Fatigue-Free Operation Even Over Long-Hour Operation

Engine of

Suspension Seat for Improved Comfort at Work

The deluxe suspension seat features improved vibration resistance and reduces the burden on the body.

- · Six-step reclining backrest
- 170 mm slide distance backward and forward
- Seat cushion adjustment dial
- The retractable seat bel

Comfortable Reversing by Preventing Exposure to Hot Air/Exhaust Gas

Two counterweight air outlets are provided on the left and right sides and an exhaust pipe outlet is provided at a lower position so that the operator is not exposed to hot air from radiator or to exhaust gasses when reversing.

Exhaust outlet

Clean Exhaust Air with a 3-Way Catalytic System (Gasoline)

The 3-way catalytic system purifies the nitrogen oxide (NOx), hydrocarbons (HC) and carbon monoxide (CO) emissions.

Wide Opening Engine Hood

with a Lock for Easy Servicing

Careful Design Facilitates Inspection and Servicing

Engine hood locking provides safety servicing

7

Fuse and relay boxes are arranged in the same location

Compact model This model is designed specifically for operating in restricted spaces. The load center is 500 mm.

Optional Specification Truck Attachments

• LPG specification truck Komatsu offers both single fuel (LPG) and dual fuel systems (LPG/Gasoline) for the LPG Specification truck.

Mast –

- 2-stage free view mast The mast enables a wide view with excellent forward visibility.
- 2-stage full free view mast This is ideal for sites with height limitations, where the large free lift is required.
- 3-stage full free view mast The mast extends in three stages and high level loading is easily performed.

Standard model

This model is designed to perform a broad range of general-purpose applications. The load center is 600 mm.

- Side shifter The fork may be shifted sideways together with its backrest, both to the right and to the left
- Fork positioner The operator is able to adjust the fork spread width from the operator's seat.
- Hinged fork The fork tilts up/down using its hinge as a fulcrum.
- Load stabilizer The load is securely held from the top by the pressure plate of the load stabilizer
- Bale clamp This attachment is recommended for handling packed pulp or raw cotton. The bale is efficiently held from both sides by the bale clamps

Fork clamp

This attachment is effective for handling packed cotton and rough textile loads by grabbing them firmly from both sides.

- Block clamp This attachment can pick up concrete blocks without using pallets.
- Rotating fork Used together with the fork inserted container, this attachment is used for transporting items such as powder, fluids, etc. The fork is rotated in order to discharge the load
- Roll clamp Rolls of paper or cylindrical objects are safely and securely handled by this attachment. It is possible to rotate the clamped load through 360 degrees.

Options

- Engine & power train related
- Extra fuel filters
- Pre-cleaner
- Spark arrester
- Upward exhaust muffler
- Radiator screen
- Right forward/reverse lever
- Automatic transmission (4.5 & 5.0 t)
- LPG swing down bracket (LPG)

Exterior

- Canvas cabin
- Steel cabin
- Heater
- Tilt cylinder boots
- Power steering cylinder protector plate
- Fuel cap with key
- Seat heater
- Front glass with wiper
- Rear view mirrors (pair)
- Resin overhead guard cover
- Fire extinguisher

Electrical equipment

- Back-up chime
- Mast mount type head lights Rear working light
- Yellow strobe light
- Red strobe light

Meters & gauges

- Air cleaner element warning lamp
- Fuel level warning lamp
- Cooling water level warning lamp
- Battery electrolyte level warning lamp
- Speedometer with alarm
- I oad checker
- Mast tilt angle gauge
- Individual key switch

Tyre-related

- Elastic cushion tyre
- Color non-marking tyre
- Double front tyre

Upward exhaust muffler Front glass with wiper
